A job can become a set of golden handcuffs for an employee. In the case of The Secret Developer, we are seeing someone who seems to hate their job but just isn't leaving it.

They're suffering from a case of the WFH handcuffs.

The WFH handcuffs

"I've spoken to some of my colleagues about the work that they're doing and it's like we are all the same.

'I think nobody else is doing their work properly. But there isn't really anything I can do since I've got to work with them'

It has occurred to me that they can't all be correct.

Then I got into a real discussion with one of my colleagues. They've got golden handcuffs on."

The WFH handcuffs

"I've had a few heart-to-hearts with my colleagues over the years.

However, those with my current colleagues are few and far between.

Imagine having a 6 comments to and fro in a PR with someone insisting their new functionality in a class is tested (without updating the test). They didn't bother testing it instead they insist that it is tested (it isn't).

Anyway, they (the same colleague at a different time) said to me that they were continuing in this job as they can work from home.

That means they can take their child to and from nursery and save

\$75 a day or so on transport. They said they'd rejected job offers

as they couldn't take the relative pay cut (even if the absolute pay is higher).

WFH 手铐，软件开发人员当心！

一份工作可以成为员工的一套金色手铐。就秘密开发人员而言，我们看到一个似乎讨厌自己的工作但没有离开工作的人。

他们患有 WFH 手铐的情况。

WFH 手铐

“我已经与一些同事谈到了他们正在做的工作，就像我们一样。

我认为没有其他人正常做他们的工作。但是，自从我必须与他们一起工作以来，我真的没有任何事情

我想到他们不能全部正确。

然后，我与一位同事进行了真正的讨论。他们有金色的手铐。”

WFH 手铐

“这些年来，我与同事们有一些心对外。

但是，与我目前的同事的人相距甚远。想象一下，对 PR 进行了 6 条评论，并通过某人坚持在课堂上的新功能进行测试（未更新测试）。他们没有费心测试它，他们坚持认为它已经进行了测试（不是）。

无论如何，他们（在不同时间的同一个同事）对我说，他们继续从事这项工作，因为他们可以在家工作。这意味着他们可以带孩子去托儿所，并每天节省 75 美元左右的运输。他们说，他们拒绝了工作机会，因为他们无法进行相对的削减薪水（即使绝对工资更高）。
